The direct operated control valve D1FP of the nominal size NG06 (CETOP 03) shows extremly high dynamics combined with maximum flow. It is the preferred choice for highest accuracy in positioning of hydraulic axis and controlling of pressure and velocity.

Driven by the patented VCD® actuator the D1FP reaches the frequency response of real servovalves. Compared with solenoid driven valves the D1FP can also be used in applications with pressure drops up to 350 bar across the valve. Because of the high flow capability the D1FP can be a substitute for NG10 valves in some cases.

At power-down the spool moves in a defined position. All common input signals are available.

Features

- Real servovalve dynamics
  (-3 dB / 350 Hz at ±5 % input signal)

- No flow limit up to 350 bar pressure drop through the valve

- Max. tank pressure 350 bar
  (with external drain port y)

- High flow

- Defined spool positioning at power-down - optional P-A/B-T or P-B/A-T or center position
  (for overlapped spools)

- Onboard electronics

Please order connector separately, see chapter 3 accessories.
Parametrizing cable OBE -> RS232, item no. 40982923

[1] On power down the spool moves in a defined position. This cannot be guaranteed in case of single flow path on the control edge A – T resp. B – T with pressure drops above 120 bar or contamination in the hydraulic fluid.

[2] Approx. 10 % opening, only zero lapped spools and underlap spools.

[3] Only for overlapped spools.

[4] Flow for code M: 35 l/min at Δp 35 bar.

[5] Plug in the Y-port needs to be removed at tank pressure >35 bar.

Enable signal (only code 5/7)	[V]	5...30, Ri = > 8 kOhm
Diagnostic signal	[V]	+10...0...-10 / +12.5 error detection, rated max. 5 mA
EMC		EN 61000-6-2, EN 61000-6-4
Electrical connection Code 0/7		6 + PE acc. EN 175201-804
Code 5		11 + PE acc. EN 175201-804
Wiring min. Code 0/7	[mm²]	7x1.0 (AWG 16) overall braid shield
Code 5	[mm²]	8x1.0 (AWG 16) overall braid shield
Wiring length max.	[m]	50

[1] If valves with onboard electronics are used in safety-related parts of control systems, in case the safety function is requested, the valve electronics voltage supply is to be switched off by a suitable switching element with sufficient reliability.

[2] For applications with p$_T$>35 bar (max. 350 bar) the Y-port has to be connected and the plug in the Y-port has to be removed.

[3] Flow rate for different ∆p per control edge: $Q_x = Q_{Nom.} \cdot \sqrt{\dfrac{\Delta p_x}{\Delta p_{Nom.}}}$
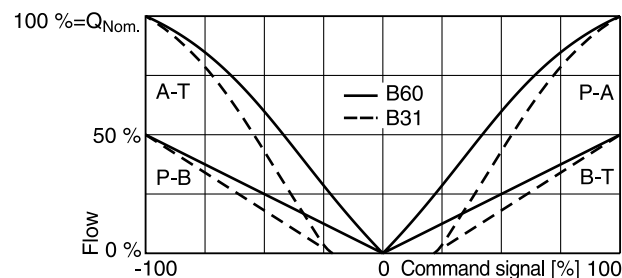

[4] Measured with load (100 bar pressure drop/two control edges).

ProPxD interface program

The ProPxD software allows quick and easy setting of the digital valve electronics. Individual parameters as well as complete settings can be viewed, changed and saved via the comfortable user interface. Parameter sets saved in the non-volatile memory can be loaded to other valves of the same type or printed out for documentation purposes.
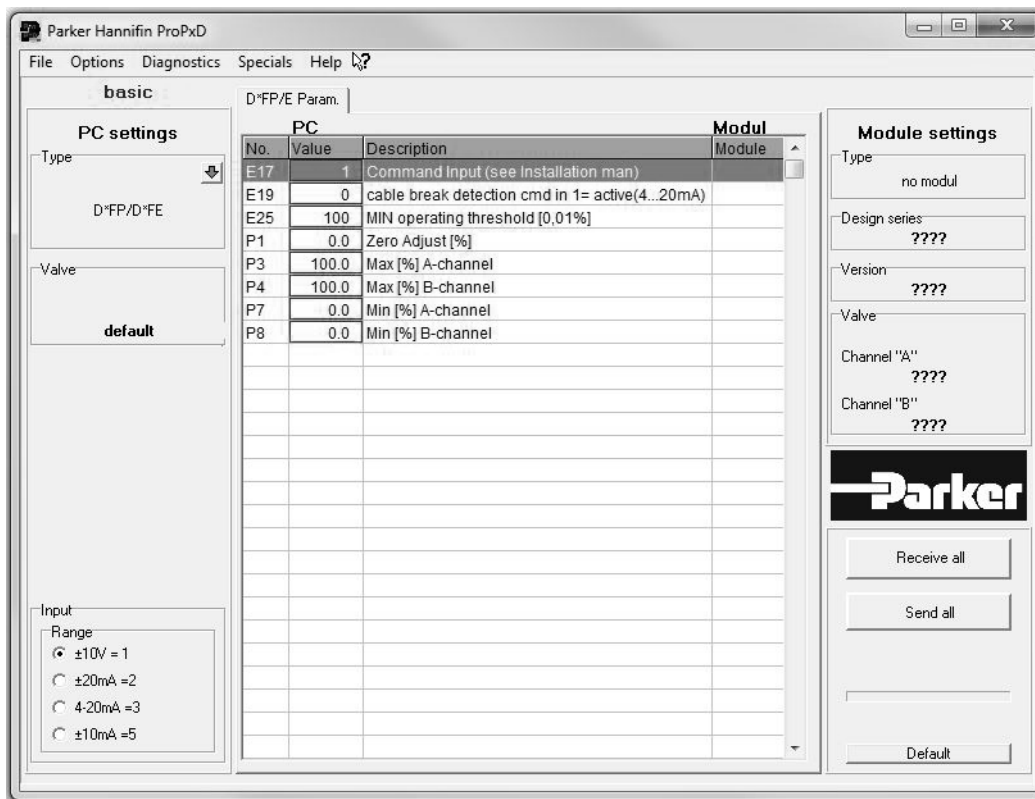

The PC software can be downloaded free of charge at www.parker.com/isde – see page "Support" or directly at www.parker.com/propxd.

Features

• Comfortable editing of valve parameters

• Saving and loading of customized parameter sets

• Executable with all Windows® operating systems from Windows® XP upwards

• Simple communication between PC and valve electronics via serial interface RS232C
The valve electronics cannot be connected to a PC with a standard USB cable – this can result in damages of PC and/or valve electronics.

The parametrizing cable may be ordered under item no. 40982923.
